Hi everyone,

I wanted to quickly follow up regarding our meeting yesterday. Below are some general comments.

1. We have discussed what to do about the hour counter and have decided to get rid of it completely and replace it with the user agreement. I am attaching the icon for this button. The functionality will be exactly the same as the quick start guide – when the user presses the button the PDF will appear. We will provide a PDF for the quick start guide and the user agreement in the next week or two.
2. Just to avoid confusion, I am resending the equation for calculating the output torque $\rightarrow T_2 = (I - I_0) * 294.3 * i_{fl} * .975^s$, where $T_2 (Nm)$ is the output torque (if the selected units are ft-lb, just convert this number from Nm to ft-lb using 1 Nm= 0.7375621 ft-lb), $I (mA)$ is the signal from the TD flange, $I_0 (mA)$ is the tared reference signal, i_{fl} is the output ratio (entered in start new record page), and s is the number of output stages (entered in start new record page)
3. We are going to proceed with the machined aluminum enclosure with the budgetary price of \$1,500 for two pieces. Please send information regarding mounting dimensions and charging directions once this is finalized. As discussed, please make sure the battery compartment is robust enough to survive being knocked around in baggage claim and at the tradeshow.

Please see below some of the action items regarding the formatting of the app. I am going to leave out changes to the Main UI screen for now since that is still a work in progress. We discussed some of the changes yesterday, but just remember to make everything as identical to the template as possible. I think the changes mentioned below will be sufficient until next week's update.

❖ Welcome and menu screen

- The logo in the top left looks a bit distorted horizontally – please keep the height and width to scale with the provided icon
- Move 'dynamic oil' image up slightly so that it is centered between the banner and the buttons
- Increase the font of the URL at the bottom
- Increase the size of the new record icon
- Increase the size of the quick start guide icon

- Please correct spelling mistake for saved records button

❖ Settings screen

- Looks great!

❖ Start new record screen

- Change "Record Name / Number*" to "Record Name"
- Please remove "Select Anchor Drive Series" and "Select Anchor Drive Model" fields
- Please swap the positions of the "Enter Output Ratio" and "Customer" fields
- Add a field called "Output Stages" above "Torque Units" – the formatting can be identical to the "Logging Interval" field with the options being 1-6 stages
- Change "Enter Drive Serial Number" to "Enter Serial Number" and change the underline color from yellow to gray to make it consistent with the other text fields

❖ Excel report

- Please print the selected units only for the torque column, not "Nm/ft-lb"

We would like to have another conference call next week. We can do Tuesday at 4:30 again since that seems to work for everyone. Please send screenshots beforehand so that we have time to review them. Keep up the good work!

Thanks,

Sam Hofmann

Sam,

Talk to you then.

Best,

Joshua
